

Tree Plantation Extractivism in Chile: Territories, Fundamental Human Needs, and Resistance

[Mora-Motta, Alejandro](#)

Part of the [Routledge Studies of the Extractive Industries and Sustainable Development](#) series

This book examines how extractivism transforms territories and affects the well-being of rural people, drawing on in-depth fieldwork conducted on tree plantations in Chile.

The book argues that pine and eucalyptus monoculture plantations in southern Chile are a form of extractivism representing a mode of nature appropriation that captures large amounts of natural resources to produce wooden-based raw materials with little processing and an export-oriented focus. The book discusses the nexus of extractivism, territorial transformations, well-being, and emerging resistances using a participatory action research methodological approach in the Region of Los Rios, southern Chile.
