Preface	3
<i>Irina Bokova, Director-General of UNESCO</i>	
Preface – A lighter carbon footprint, a greener world	7
<i>Olive Shisana, President, ISSC</i>	
Acknowledgements	13
Acronyms and abbreviations	17
Changing global environments	31
1. Social sciences in a changing global environment: General introduction by Heide Hackmann and Susanne Moser.....	33
2. Global environmental change changes everything: Key messages and recommendations by Susanne Moser, Heide Hackmann and Françoise Caillods ...	46
Part 1 – The complexity and urgency of global environmental change and social transformation	65
3. Social and environmental change in a complex, uncertain world: Introduction to Part 1 by Heide Hackmann and Susanne Moser.....	67
4. What's the problem? Putting global environmental change into perspective by Karen O'Brien.....	71
5. The challenge of sustainable development and the social sciences by Jeffrey D. Sachs.....	79
6. Between social and planetary boundaries: Navigating pathways in the safe and just space for humanity by Melissa Leach, Kate Raworth and Johan Rockström.....	84
7. Inclusive wealth and the transition to sustainability by Anantha Kumar Duraiappah, Pablo Muñoz and Elorm Darkey.....	90
8. Gender and environmental change by Bina Agarwal.....	93
9. Social science understandings of transformation by Katrina Brown, Saffron O'Neill and Christo Fabricius.....	100
10. Changing the conditions of change by learning to use the future differently by Riel Miller.....	107
11. A new vision of open knowledge systems for sustainability: Opportunities for social scientists by J. David Tabara.....	112
12. Viewpoint: Open knowledge and learning for sustainability by Tim O'Riordan.....	119
Part 2 – Social science capacity in global environmental change research	123
13. Regional divides in global environmental change research capacity: Introduction to Part 2 by Françoise Caillods.....	125

14. The social sciences and global environmental change in the United States by Thomas J. Wilbanks, Thomas Dietz, Richard H. Moss and Paul C. Stern	133
15. Social sciences at the crossroads: Global environmental change in Latin America and the Caribbean by Julio C. Postigo, Gustavo Blanco Wells and Pablo Chacón Cancino	142
16. Brazilian studies on environmental activism by Angela Alonso and Débora Maciel	152
17. Social sciences and global environmental change research in Latin America by Andrea Lampis (CLACSO)	155
18. Quo vadis? The state of social sciences and climate and global environmental change in Europe by Carolina E. Adler and Katharina Rietig	158
19. The state of social sciences and global environmental change in Russia by Oleg Yanitsky with boxes by Boris Porfiriev and Arkady Tishkov	168
20. Global environmental change and the social sciences in the Arab world by Ismail Serageldin	177
21. Social science perspectives on global environmental change in sub-Saharan Africa by Coleen Vogel	184
22. African perspectives needed on global environmental change research by James Murombedzi (for CODESRIA)	192
23. Global environmental change and the social sciences in eastern and southern Africa by Paulos Chanie (for OSSREA)	196
24. Social science research and global environmental change in India and South Asia by Aromar Revi and Neha Sami	198
25. Social science research on climate change in China by Ying Chen and Laihui Xie	207
26. Social sciences in Japan after Fukushima by Aysun Uyar	215
27. Social science research on global environmental change in the Asia-Pacific region by John Beaton (for AASSREC)	220
Part 3 – The consequences of global environmental change for society	223
28. The consequences of global environmental change: Introduction to Part 3 by Diana Feliciano and Frans Berkhout	225
29. Are Algerian agro-pastoralists adapting to climate change? by Slimane Bédrani and Mohamed El Amine Benhassine	230
30. Relocation as a policy response to climate change vulnerability in northern China by Yan Zheng, Jiahua Pan and Xiaoyu Zhang	234
31. Climate change, flooding and economic well-being in Nigerian cities by Isaac B. Oluwatayo	242
32. Resilience and adaptation in Dhaka, Bangladesh by Saleh Ahmed	246
33. Population and land-change dynamics in the Brazilian Amazon by Julia Cortes and Álvaro D'Antona	250
34. The risks of global warming to coral reef ecosystems by Sabah Abdullah	255
35. Vulnerable and resilient children after disasters and gene-environment interplay by Rainer K. Silbereisen, Marinus van Ijzendoorn and Kan Zhang	257
36. Migration as an adaptation strategy to environmental change by W. Neil Adger and Helen Adams	261
37. The paradoxes of climate change and migration by Andrew Baldwin and François Gemenne	265

38. The role of the social sciences in adapting to climate change in northern Europe by <i>Carina Kesitalo</i>	269
39. Women and climate change adaptation in Zimbabwe by <i>Donald Chimanikire</i>	273
40. Ex-rubber tappers' and small farmers' views of weather changes in the Amazon by <i>Erika Mesquita</i>	277
Part 4 – Conditions and visions for change and sense-making in a rapidly changing world	281
41. Possibilities and prospects of social change in response to the environmental crisis: Introduction to Part 4 by <i>Susanne Moser</i>	283
42. Promises and pitfalls of the green economy by <i>Ivan Turok</i> and <i>Jacqueline Borel-Saladin</i>	289
43. Viewpoint: Making sense of techno-optimism? The social science of nanotechnology and sustainability by <i>Mammo Muchie</i> and <i>Hailemichael T. Demissie</i>	295
44. Bringing new meanings to molecules by integrating green chemistry and the social sciences by <i>Steve Maguire, Alastair Iles, Kira Matus, Martin Mulvihill, Megan R. Schwarzman</i> and <i>Michael P. Wilson</i>	300
45. Individual and collective behaviour change by <i>Elke U. Weber</i>	306
46. Going green? Using evolutionary psychology to foster sustainable lifestyles by <i>Mark van Vugt</i> and <i>Vladas Griskevicius</i>	312
47. Environmental issues and household sustainability in Australia by <i>Lesley Head, Carol Farbotko, Chris Gibson, Nick Gill</i> and <i>Gordon Waitt</i>	316
48. Models of human behaviour in social-ecological systems by <i>Giuseppe Feola</i>	321
49. Social aspects of solid waste in the global South by <i>Jutta Gutberlet</i>	326
50. Incentives for low-carbon communities in Shanghai, China by <i>Lei Song</i>	333
51. Climate change education and Education for Sustainable Development by <i>UNESCO</i>	335
52. Education, science and climate change in French schools by <i>Guillaume Arnould</i>	338
53. Are increasing greenhouse gas emissions inevitable? by <i>John Urry</i>	340
54. The human dimensions of global environmental change by <i>Tom W. Smith</i>	345
55. Environmental attitudes and demographics by <i>Nick Johnstone, Ysé Serret-Itzicsohn</i> and <i>Zachary Brown</i>	354
56. Sustainable consumption and lifestyles? Children and youth in cities by <i>Khairon Abbas, Ian Christie, Fanny Demassieux, Bronwyn Hayward, Tim Jackson</i> and <i>Fabienne Pierre</i>	357
57. Bringing poor people's voices into policy discussions by <i>Deborah S. Rogers</i>	362
58. Climate is culture by <i>David Buckland</i>	365
Part 5 – The responsibilities and ethical challenges in tackling global environmental change	369
59. Towards greater fairness in sharing the risks and burdens of global environmental change: Introduction to Part 5 by <i>Diana Feliciano</i> and <i>Susanne Moser</i>	371
60. Winning environmental justice for the Lower Mekong Basin by <i>Cassandra Pillay</i>	376
61. Climate change mitigation, a problem of injustice by <i>Steve Vanderheiden</i>	378

62. Ethics and energy consumption by Darryl Macer	381
63. The ethics of geoengineering by Diana Feliciano	385
64. Ethics as a core driver of sustainability in the Caribbean by Pedro Monreal Gonzalez	388
65. The role of religion, education and policy in Iran in valuing the environment by Hossein Godazgar	391
66. Sacred sustainability? Benedictine monasteries in Austria and Germany by Valentina Aversano-Dearborn, Bernhard Freyer and Sina Leipold	395
67. Public engagement in discussing carbon capture and storage by Leslie Mabon and Simon Shackley	398
68. Biodiversity loss and corporate commitment to the UN Global Compact by Chris Monks	403
69. Towards responsible social sciences by Asuncion Lera St. Clair	408
Part 6 – New approaches to governance and decision-making	413
70. Dealing with “wicked” environmental problems: Introduction to Part 6 by Diana Feliciano and Frans Berkhout	415
71. Is the IPCC a learning organisation? by Silke Beck	420
72. Viewpoint: Failing to translate science into policy? From Stockholm 1972 to Rio+20 by Roberto P. Guimarães	425
73. The role of LA RED in disaster risk management in Latin America by Allan Lavell, Alonso Brenes and Pascal Girot	429
74. A functional risk society? Progressing from management to governance while learning from disasters by Urbano Fra. Paleo	434
75. Viewpoint: Transition to sustainable societies – was Rio+20 a missed opportunity? by Diana Sanchez Betancourt and Dominik Reusser	439
76. Social learning and climate change adaptation in Thailand by Witchuda Srang-iam	441
77. Indigenous groups and climate change in Colombia by Miguel Borja	445
78. Fighting to include local voices in environmental policy-making in Brazil by Raoni Rajão	448
79. The need for indigenous knowledge in adaptation to climate change in Nigeria by Godwin Odok	453
80. Quebec's Plan Nord and integrating indigenous knowledge into social science research by Steve Jordan	456
81. Participatory water governance in Mercosur countries by Alfredo Alejandro Gugliano and Davide Carbonai	460
82. Glass half full or half empty? Transboundary water co-operation in the Jordan River Basin by Anders Jägerskog	464
83. Global governance and sustainable development by Alberto Martinelli	467
84. The politics of climate change and grassroots demands by Antônio A. R. Ioris	472
85. Green informal services in India? Rickshaws, rag picking and street vending by Ashima Sood	476
86. Debating transformation in multiple crises by Ulrich Brand, Achim Brunnengräber (lead authors)	480

87. Payments for ecosystem services in biodiversity conservation by Katia Karousakis and Edward Perry	485
88. Monitoring the effectiveness of adaptation investments by Nicolina Lamhauge and Michael Mullan	487
Part 7 – Contributions from International Social Science Council members, programmes and partners	491
89. Contributions from International Social Science Council members, programmes and partners: Introduction to Part 7 by the International Social Science Council	493
90. Anthropology and environmental change from a holistic and cultural perspective by Thomas Reuter (for WCAA and IUAES)	497
91. Psychological approaches and contributions to global environmental change by Kurt Pawlik and Linda Steg (for IUPsyS)	500
92. The economics of climate and environmental change by Andrew Steer (for IEA)	503
93. The humanities and changing global environments by Rosi Braidotti, Kum Kum Bhavnani, Poul Holm and Hsiung Ping-chen	506
94. Sociology and global environmental change by Stewart Lockie (for ISA)	509
95. Geography and global environmental change by Michael Meadows (for IGU)	512
96. Political science, global environmental change and sustainable development by Guy Lachapelle (for IPSA)	514
97. Earth System Governance	517
98. Global Water System Project	519
99. Global Environmental Change and Human Security	521
100. Integrated History and Future of People on Earth	523
101. Industrial Transformation	525
102. Urbanization and Global Environmental Change	527
103. Land–Ocean Interactions in the Coastal Zone	529
104. Global Carbon Project	531
105. Global Environmental Change and Food Systems	533
106. Global Environmental Change and Human Health	536
107. Global Land Project	538
108. Integrated Research on Disaster Risk programme	540
Annexes	543
Annex A. Basic statistics on the production of social science research	544
Annex B. Bibliometric analysis of social science research into global environmental change	583
B1. Bibliometric analysis of social science research into climate and global environmental change by Ludo Waltman	584
Glossary	607

Tables

9.1. Definitions of transformation from the social sciences.....	101
9.2. Examples of transformation within environmental change.....	104
21.1. Social science publications (full counting) on climate change and global environmental change by themes in the sub-Saharan region	186
25.1. Numbers of articles on climate change research in Chinese social science journals by discipline, 2005 to 2011.....	209
25.2. Number of climate-change-related projects supported by the National Social Sciences Foundation of China	211
25.3. Number of research projects supported by the Ministry of Education's fund for research in the humanities and social sciences in China	212
29.1. Characteristics of the average holdings of a sample of pastoralists in rural Algeria, per agro-pastoralist type.....	231
30.1. Determinants and indicators to understand the vulnerability of the Ningxia rural community to climate change	236
30.2. Stages of Ningxia government-sponsored relocation projects since the 1980s.....	238
47.1. Examples of traction towards sustainability and friction against sustainability in the household context.....	318
54.1. Most important problems by country, 2010	346
54.2. Most important environmental problems by country, 2010	347
54.3. Most important environmental problems by country versus self and family; percentage selecting climate change, 2010.....	348
54.4. "Dangerousness" of climate change, 2010	349
54.5. Trends in saying global warming or climate change is extremely dangerous, 1993 to 2010.....	350
54.6. Age or cohort difference on the "danger" of climate change, 2010	351
68.1. Biodiversity impact by economic sector.....	405
68.2. Comparison of UN Global Compact participators and non-participators.....	406
74.1. Principal lessons from major selected disasters.....	435
74.2. Some dialectic approaches in risk governance and convergence	437
79.1. Indigenous forest management practices in rural Nigeria.....	453
A1. Socio-economic indicators, 2012	545
A2. Expenditure on research and development, 2011 or latest available year	549
A3. Researchers by sector of employment and field of science (headcounts (HC) and full-time equivalents (FTE)), 2011 or latest available year.....	552
A4. Student enrolments, by level, total, social science, business and law, and gender selected years, 2000 to 2011	564
A5. Student graduation, by level, total, social science, business and law, and gender, selected years, 2000 to 2011.....	571
A6. Number of publications of the highest-producing countries in science, social sciences, arts and humanities, 2007 to 2011	578
A7. Number of social science publications per country for 2002 to 2006 and 2007 to 2011, Scopus and Web of Science	580

1. Web of Science fields included in the identification of social science publications.....	585
2. The 40 search terms and their scores.....	586
3. Main topics identified in the social science literature on global environmental change and number of publications concerned	588
4. List of tables in Annex B	590
B1. Number of social science publications on global environment change per year, 1990 to 2011	598
B2. Number of social science publications (fractional counting) on global environment change per Web of Science field of study and time period, 1990 to 2011	599
B3. Number of social science publications (fractional counting) on global environment change per region, country, and time period, 1990 to 2011	601
B4. Number of social science publications (fractional counting) on climate change and global environmental change per region and time period, 1990 to 2011	603
B5. Number of social science publications (fractional counting) on global environment change per Web of Science field of study and region for the entire period, 1990 to 2011.....	604
B6. Number of social science publications (fractional counting) on global environmental change per topic for different time periods, 1990 to 2001	605
B7. Number of social science publications (fractional counting) on global environmental change per topic and region for two time periods, 1990 to 1999 and 2000 to 2011.....	606

Figures

2.1. The four main messages of the <i>World Social Science Report 2013</i> and the stakeholder communities to whom they are addressed.....	49
4.1. Long-run CO ₂ concentrations and temperature increase: Baseline, 1970 to 2100	72
4.2. Global mean species abundance per biome, 1970 to 2010.....	73
4.3. Nitrogen surpluses per hectare from agriculture: Baseline, 2000 and 2050	73
4.4. Global water demand: Baseline scenario, 2000 and 2050.....	74
6.1. Social and planetary boundaries.....	86
6.2. Possibilities within the safe and just space	87
7.1. Average annual growth rates (per capita) disaggregated by capital form	91
9.1. South Africa's transformation was driven by complex fast and slow processes on national and international scales.....	103
11.1. Knowledge from a single type of source poured into a closed container	113
11.2. Knowledge from many sources, all organised around concrete needs and practices, operating in a social-ecologically coupled open space	113
13.1. Social science publications on global environmental change per year, 1990 to 2011	126
13.2. Number of social science publications on global environmental change per region, 1990 to 2011.....	127

13.3. Number of social science publications on global environmental change per country, 1990 to 2011	128
13.4. Number of social science publications on global environmental change by cluster of themes and region, 2000 to 2011	130
15.1. Social science publications on global environmental change in Latin America and the Caribbean, 1990 to 2011	144
18.1. Proportion of European social science publications worldwide on global environmental change, 1990 to 2011	162
18.2. Number of social science publications on global environmental change, regional proportions within Europe, 1990 to 2011	162
24.1. Number of social science articles on climate change and global environmental change by region, 1990 to 2011	200
24.2. Number of social science publications on climate change and global environmental change in South and West Asia for the ten most prolific Web of Science fields of study, 1990 to 2011	201
25.1. Number of articles on climate change in social science journals in China, 1992 to 2011	208
30.1. Variation in annual temperature and precipitation in Ningxia, 1961 to 2010	235
30.2. Ningxia rural community vulnerability mapping	237
33.1. Annual change in forest area by region	250
33.2. The fishbone land pattern along the Amazonian highways (A) and property with multiple land uses and cover (B)	252
33.3. Association between household stage and type of land use in the household lifecycle model	253
36.1. Relationship between vulnerability to environmental change and mobility	262
48.1. The integrative agent-centred framework	323
55.1. Levels of agreement with seven statements about environmental policy	355
55.2. Views on intergenerational equity across ages	355
55.3. Views on need for reciprocity across genders	356
67.1. Carbon capture and storage system (not to scale)	399
68.1. Corporate biodiversity assessment results	406
74.1. The unfolding of risk governance	436
78.1. Map showing deforestation patterns, main roads and protected areas in the Amazon. It illustrates the ability of scientific representations to provide visual, comprehensive and deterministic accounts of the Amazon. ...	451
89.1. Number of social science publications (fractional counting) on climate change and global environmental change by Web of Science fields of study, 1990 to 2011	494
105.1. Food system activities and their outcomes	534
B1.1. Term map based on the titles and abstracts of the 27 499 selected social science publications on global environmental change	596
