Preface	xxv
List of Contributors	xxvii
<b>1 INTRODUCTION</b>	<b>1</b>
<i>Niklas Möller, Sven Ove Hansson, Jan-Erik Holmberg, and Carl Rollenhagen</i>	
1.1 Competition, Overlap, and Conflicts	1
1.2 A New Level in the Study of Safety Principles	2
1.3 Metaprinciples of Safety	3
1.4 Other Ways to Characterize Safety Principles	5
1.5 Conflicts Between Safety Principles	7
1.6 When Can Safety Principles Be Broken?	8
1.7 Safety in Context	9
References	10
<b>2 PREVIEW</b>	<b>11</b>
<i>Niklas Möller, Sven Ove Hansson, Jan-Erik Holmberg, and Carl Rollenhagen</i>	
2.1 Part I: Safety Reserves	12
2.2 Part II: Information and Control	13
2.3 Part III: Demonstrability	16
2.4 Part IV: Optimization	17
2.5 Part V: Organizational Principles and Practices	20

<b>Part I</b>	<b>Safety Reserves</b>	<b>23</b>
<b>3</b>	<b>RESILIENCE ENGINEERING AND THE FUTURE OF SAFETY MANAGEMENT</b>	<b>25</b>
	<i>Erik Hollnagel</i>	
3.1	On the Origins of Resilience	25
3.2	The Resilience Engineering Understanding of "Resilience"	27
3.3	The Four Potentials for Resilience Performance	29
3.4	Safety Management Systems	31
3.5	Developing Definitions of Resilience	33
3.6	Managing the Potentials for Resilient Performance	34
3.6.1	Organizations of the First Kind	35
3.6.2	Organizations of the Second Kind	36
3.6.3	Organizations of the Third Kind	36
3.6.4	Organizations of the Fourth Kind	37
3.7	Resilience Management: LP-HI OR HP-LI?	37
	References	39
<b>4</b>	<b>DEFENSE-IN-DEPTH</b>	<b>42</b>
	<i>Jan-Erik Holmberg</i>	
4.1	Introduction	42
4.2	Underlying Theory and Theoretical Assumptions	43
4.2.1	Definitions and Terminology	43
4.3	Redundancy, Diversity, and Separation Principles	44
4.3.1	Principle of Successive Barriers and Reducing Consequences	46
4.3.2	Principle of Accident Prevention and Mitigation	47
4.3.3	Classification of Barriers	49
4.3.4	Safety Classification	50
4.3.5	Overall Safety Goals and Risk Acceptance Criteria vs. Defense-in-Depth	51
4.4	Use and Implementation	53
4.4.1	Nuclear Power Plant Safety	53
4.4.2	Chemical Industry	54
4.4.3	Information Technology Security	55
4.4.4	Railway Safety	56
4.4.5	Automobile Safety	57

4.5	Empirical Research on use and Efficiency	57
4.6	Weaknesses, Limitations, and Criticism	57
4.7	Relations to Other Safety Principles	59
	References	60
	Further Reading	61
<b>5</b>	<b>SAFETY BARRIERS</b>	<b>63</b>
	<i>Lars Harms-Ringdahl and Carl Rolihøgen</i>	
5.1	Introduction	63
	5.1.1 Classical and Radical Definitions of Barriers	64
	5.1.2 Examples	64
5.2	Origin and Theoretical Background	65
	5.2.1 Energy and Sequence Models	65
	5.2.2 Extended Models	66
5.3	Definitions and Terminology	67
	5.3.1 Examples of Barrier Definitions	67
	5.3.2 Barriers and Barrier Systems	68
	5.3.3 Alternatives to the Barrier Concept	69
	5.3.4 Safety Functions	70
	5.3.5 Conclusion	71
5.4	Classification of Barriers	71
	5.4.1 General Considerations	71
	5.4.2 System Level Classification	72
	5.4.3 Classification Related to Accident Sequence	72
	5.4.4 Physical and Non-physical Barriers	72
	5.4.5 Administrative and Human Barriers	73
	5.4.6 Passive and Active Barriers	73
	5.4.7 Combined Models	74
	5.4.8 Purpose of Barriers	75
5.5	Methods for Analysis of Safety Barriers	75
	5.5.1 Energy Analysis	76
	5.5.2 Event Tree Analysis	76
	5.5.3 Fault Tree Analysis	77
	5.5.4 Safety Barrier Diagrams	77
	5.5.5 Management Oversight and Risk Tree	78

5.5.6	MTO Event Investigation	78
5.5.7	Safety Function Analysis	78
5.5.8	Reliability Techniques	78
5.6	Quality and Efficiency of Barriers	79
5.6.1	Design and Installation of Barriers	79
5.6.2	Management of Barrier Systems During Operation	80
5.6.3	Maintenance of Barriers	80
5.6.4	Summary of Barrier Management Principles	81
5.7	Discussion and Conclusions	82
5.7.1	The Classical and Radical Meaning	82
5.7.2	Empirical Research on Use and Efficiency	83
5.7.3	General Conclusions	83
5.7.4	Relations to the Other Chapters	84
	References	84
<b>6</b>	<b>FACTORS AND MARGINS OF SAFETY</b>	<b>87</b>
	<i>Neelke Doorn and Sven Ove Hansson</i>	
6.1	Introduction	87
6.2	Origin and History	91
6.3	Definitions and Terminology	92
6.4	Underlying Theory and Theoretical Assumptions	94
6.4.1	Structural Engineering	95
6.4.2	Toxicology	97
6.5	Use and Implementation	98
6.5.1	Three Types of Numerical Safety Reserves	98
6.5.2	How Safety Factors are Determined	99
6.6	Empirical Research on Use and Efficiency	101
6.6.1	Engineering	101
6.6.2	Toxicology	102
6.7	Weaknesses, Limitations, and Criticism	103
6.8	Relations to Other Safety Principles	105
6.8.1	Probabilistic Analysis	105
6.8.2	Cost-Benefit Analysis	106
	Acknowledgment	108
	References	108
	Further Reading	114

<b>Part II</b>	<b>Information and Control</b>	<b>115</b>
<b>7</b>	<b>EXPERIENCE FEEDBACK</b>	<b>117</b>
	<i>Urban Kjellén</i>	
7.1	Introduction	117
	7.1.1 Example	117
7.2	Origin and History	118
7.3	Definitions	121
7.4	Underlying Theories and Assumptions	122
	7.4.1 Feedback Cycle for the Control of Anything	122
	7.4.2 Safety Information Systems	124
	7.4.3 The Diagnostic Process	125
	7.4.4 Knowledge Management	126
7.5	Use and Implementation	127
	7.5.1 Safety Practice in an Operational Setting	127
	7.5.2 Risk Assessment	131
	7.5.3 Transfer of Experience to New Construction Projects	132
	7.5.4 Transfer of Experience from the Users to Design	133
7.6	Empirical Research on Use and Efficiency	135
7.7	Relations to Other Safety Principles	137
	7.7.1 Safety Management	137
	7.7.2 Resilience Engineering	138
	7.7.3 Safety Indicators	138
	7.7.4 Safety Culture	138
	References	138
	Further Reading	141
<b>8</b>	<b>RISK AND SAFETY INDICATORS</b>	<b>142</b>
	<i>Draw Rae</i>	
8.1	Introduction	142
8.2	Origin and History	143
8.3	Definitions and Terminology	145
8.4	Underlying Theory and Theoretical Assumptions	146
	8.4.1 Past, Present, and Future Safety	146
	8.4.2 Outcome Indicators	147
	8.4.3 Risk Models and Precursor Events	148

8.4.4	Status of Physical and Procedural Controls	150
8.4.5	Safe Behaviors	150
8.4.6	Amount and Quality of Safety Activity	151
8.4.7	Organizational Drivers and Attributes	151
8.4.8	Variability	152
8.5	Use and Implementation	152
8.5.1	Metrics Collection	152
8.5.2	Incentives and Accountability	153
8.5.3	Benchmarking and Comparison	153
8.5.4	Safety Management System Performance Monitoring	154
8.6	Empirical Research on Use and Efficacy	154
8.6.1	Usage of Indicators	154
8.6.2	Efficacy of Indicators	155
8.7	Weaknesses, Limitations, and Criticism	155
8.7.1	Underreporting and Distortion	155
8.7.2	The Regulator Paradox and Estimation of Rare Events	156
8.7.3	Confusion Between Process Safety and Personal Safety Indicators	157
8.7.4	Unintended Consequences of Indirect Measurement	157
8.8	Relations to Other Safety Principles	158
8.8.1	Insurance Principles	158
8.8.2	Assessment and Assurance Principles	159
	References	159
<b>9</b>	<b>PRINCIPLES OF HUMAN FACTORS ENGINEERING</b>	<b>164</b>
	<i>Leena Nurros and Paula Savioja</i>	
9.1	Introduction	164
9.2	Principle 1: HFE is Design Thinking	167
9.2.1	Description	167
9.2.2	Theoretical Foundation	168
9.2.3	Use and Implementation	170
9.2.4	Empirical Research on Use and Efficiency	170
9.3	Principle 2: HFE Studies Human as a Manifold Entity	172
9.3.1	Description	172
9.3.2	Theoretical Foundations	172
9.3.3	Use and Implementation	174
9.3.4	Empirical Research on Use and Efficiency	175

9.4	Principle 3: HFE focuses on Technology in Use	177
9.4.1	Description	177
9.4.2	Theoretical Foundations	177
9.4.3	Use and Implementation	180
9.4.4	Empirical Research on Use and Efficiency	181
9.5	Principle 4: Safety is Achieved Through Continuous HFE	182
9.5.1	Description	182
9.5.2	Theoretical Foundation	182
9.5.3	Use and Implementation	183
9.5.4	Empirical Research on Use and Efficiency	185
9.6	Relation to Other Safety Principles	187
9.7	Limitations	188
9.8	Conclusions	189
	References	190
	Further Reading	195
<b>10</b>	<b>SAFETY AUTOMATION</b>	<b>196</b>
	<i>Lijón Wahlström</i>	
10.1	Introduction	196
10.1.1	Purpose of Safety Automation	197
10.1.2	Functions of I&C Systems	199
10.1.3	Allocation of Functions between Humans and Automation	200
10.2	Origin and History	201
10.2.1	Roots of Safety Automation	201
10.2.2	Systems Design	202
10.2.3	Typical Design Projects	203
10.2.4	Analog and Digital I&C	204
10.3	Definitions and Terminology	205
10.3.1	System Life Cycles	205
10.3.2	Process and Product	206
10.3.3	Phases of Design	206
10.3.4	Operations	210
10.4	Underlying Theories and Assumptions	211
10.4.1	Systems of Systems	212
10.4.2	Building Reliability with Unreliable Parts	213

10.4.3	Reusability of Designs	213
10.4.4	Vendor Capability	213
10.4.5	Project Management	214
10.4.6	Regulatory Oversight	215
10.5	Use and Implementation	215
10.5.1	From Systems Design to I&C Design	215
10.5.2	Physical Realizations of I&C	216
10.5.3	Initial Considerations	216
10.5.4	I&C Design	217
10.5.5	Practices in Different Domains	220
10.6	Research on Use and Efficiency	220
10.6.1	Estimates of Project Cost and Duration	220
10.6.2	Support Systems for Design and Construction	221
10.6.3	Benefits of Using Safety Principles	221
10.7	Weaknesses, Limitations, and Criticism	222
10.7.1	What is Safe Enough?	222
10.7.2	Quality of Design	224
10.7.3	Field Programmable Gate Arrays	224
10.7.4	Cyber Security	224
10.7.5	Regulatory Acceptance	225
10.8	Relations to Other Safety Principles	225
10.8.1	Safety Reserves	226
10.8.2	Information and Control	226
10.8.3	Demonstrability	227
10.8.4	Optimization	227
10.8.5	Organizational Principles and Practices	228
10.9	Summary and Conclusions	228
	References	229

## **11 RISK COMMUNICATION** **235**

*Jan M. Gutting*

11.1	Introduction	235
11.1.1	Example 1	236
11.1.2	Risk Perception, Awareness, and Communication	236
11.1.3	This Chapter	238

11.2	The Origin and History of Risk Communication as Academic Field	238
11.2.1	Example 2	239
11.2.2	Changing Notions about Communication	239
11.2.3	Example 3	241
11.2.4	Conclusion	241
11.3	Underlying Assumptions, Concepts and Empirical Data on Risk Communication Models	241
11.3.1	Information versus Communication	241
11.3.2	Risk Communication Aims	243
11.3.3	Diagnostic Risk Communication Studies	244
11.3.4	Social Amplification of Risk	245
11.3.5	Trust in Risk Communication	246
11.3.6	Socio-Cognitive Models	247
11.3.7	Risk Information Seeking Models	247
11.3.8	Risk Communication and Social Media	249
11.3.9	Conclusion	250
11.4	Weaknesses, Limitations, and Criticism	250
11.5	Final Word	252
	References	252
	Further Reading	257
<b>12</b>	<b>THE PRECAUTIONARY PRINCIPLE</b>	<b>258</b>
	<i>Sven Ove Hansson</i>	
12.1	Introduction	258
12.2	History and Current Use	259
12.3	Definitions	263
12.4	Underlying Theory	267
12.5	Research on Use and Efficiency	271
12.6	Weaknesses, Limitations, and Criticism	271
12.6.1	Is the Principle Asymmetric?	271
12.6.2	Strawman Criticism	273
12.7	Relation to Expected Utility and Probabilistic Risk Assessment	273
12.8	Relations to Other Safety Principles	276
12.8.1	Maximin	276
12.8.2	A Reversed Burden of Proof	278
12.8.3	Sound Science	278

	Acknowledgment	279
	References	279
	Further Reading	283
<b>13</b>	<b>OPERATING PROCEDURE</b>	<b>284</b>
	<i>Jinhyun Park</i>	
13.1	Introduction	284
13.2	Manual, Guideline, and Procedure	286
13.3	Existing Principles for Developing a Good Procedure	288
13.4	Additional Principle to Develop a Good Procedure	292
	13.4.1 Tailoring the Level of Details	293
	13.4.2 Tailoring the Complexity of Instructions	297
13.5	Concluding Remarks	299
	References	301
	Further Reading	304
<b>14</b>	<b>HUMAN-MACHINE SYSTEM</b>	<b>305</b>
	<i>Anna-Liisa Osvaelder and Håkan Alm</i>	
14.1	Human-Machine System	306
14.2	Complex Systems	307
14.3	To Control a Complex System	307
14.4	Operator Demands	308
	14.4.1 Mental Models	308
	14.4.2 Situation Awareness	310
	14.4.3 Decision-Making	310
	14.4.4 Mental Workload	311
14.5	Performance-Shaping Factors	313
	14.5.1 Stressors	314
14.6	User Interface Design	315
	14.6.1 Information Design	315
	14.6.2 Design for Attention	316
	14.6.3 Design for Perception	317
	14.6.4 Design for Memory Functions	319
	14.6.5 Feedback	320
	14.6.6 Alarms	321

14.7	Demands on the Environment	322
14.7.1	Organization	322
14.7.2	Communication	324
14.8	Handling Complexity	327
	References	329
<b>Part III Demonstrability</b>		<b>331</b>
<b>15</b>	<b>QUALITY PRINCIPLES AND THEIR APPLICATIONS TO SAFETY</b>	<b>333</b>
	<i>Bo Bergman</i>	
15.1	Introduction	333
15.2	Improvement Knowledge and its Application to Safety	338
15.2.1	Understanding Variation	338
15.2.2	Knowledge Theory	345
15.2.3	Psychology	348
15.2.4	System Thinking	348
15.3	Health-Care Improvement and Patient Safety	349
15.4	Weaknesses, Limitations, and Criticism	351
15.5	Some Personal Experiences	352
15.6	Relations to Other Safety Principles	353
	References	355
	Further Reading	360
<b>16</b>	<b>SAFETY CASES</b>	<b>361</b>
	<i>Tim Kelly</i>	
16.1	Introduction	361
16.2	Origins and History	361
16.2.1	Windscale	362
16.2.2	Flixborough	362
16.2.3	Piper Alpha	363
16.2.4	Clapham	363
16.2.5	The Introduction of Safety Cases—A Shift in Emphasis	364
16.3	Definitions and Terminology	364
16.3.1	Safety Cases vs. Safety Case Reports	366
16.3.2	Other Terminology	367

16.4	Underlying Theory	367
16.4.1	Safety Case Argumentation	367
16.4.2	Types of Safety Case Argument	369
16.4.3	Safety Case Lifecycle	372
16.4.4	Incremental Safety Case Development	373
16.4.5	Safety Case Maintenance	374
16.4.6	Safety Case Evaluation	375
16.4.7	Safety Case Confidence	376
16.5	Empirical Research on Use and Efficiency	377
16.6	Weaknesses, Limitations, and Criticisms	377
16.6.1	Other Criticisms	381
16.7	Relationship to Other Principles	382
	References	383
	Further Reading	385
<b>17</b>	<b>INHERENTLY SAFE DESIGN</b>	<b>386</b>
	<i>Rajagopalan Srinivasan and Mohd Umair Iqbal</i>	
17.1	Introduction	386
17.2	Origin and History of the Principle	387
17.3	Definitions and Terminology	388
17.4	Use and Implementation	389
17.4.1	Examples of Minimization	390
17.4.2	Examples of Substitution	391
17.4.3	Examples of Simplification	391
17.4.4	Example of Moderation	391
17.5	Empirical Research on Use and Efficiency	392
17.6	Weaknesses, Limitation, and Criticism	393
17.7	Relation to Other Principles	394
	References	394
<b>18</b>	<b>MAINTENANCE, MAINTAINABILITY, AND INSPECTABILITY</b>	<b>397</b>
	<i>Torbjörn Ylipää, Anders Skoogh, and Jon Bokrantz</i>	
18.1	Introduction	397
18.1.1	The Piper Alpha Disaster	398
18.2	Origin and History	399

18.3	Underlying Theory Theoretical Assumptions, Definition, and Terminology	400
18.4	Use and Implementation	405
18.5	Empirical Research on Use and Efficiency	408
18.6	Weaknesses, Limitations, and Criticism	409
18.7	Relations to Other Safety Principles	410
