|----------------------------------------------------------------|-----------|
| <b>About the Author</b>                                        | <b>x</b>  |
| <b>Preface</b>                                                 | <b>xi</b> |
| <br>                                                           |           |
| <b>1 Introduction</b>                                          | <b>1</b>  |
| 1.1 Computational concerns for algorithms                      | 2         |
| 1.2 Coding                                                     | 6         |
| 1.3 How to use this book                                       | 7         |
| <br>                                                           |           |
| <b>I GEOMETRIC ALGORITHMS</b>                                  | <b>9</b>  |
| <br>                                                           |           |
| <b>2 Basic Geometric Operations</b>                            | <b>11</b> |
| 2.1 Point                                                      | 11        |
| 2.2 Distance between two points                                | 13        |
| 2.3 Distance from a point to a line                            | 15        |
| 2.4 Polygon centroid and area                                  | 18        |
| 2.5 Determining the position of a point with respect to a line | 20        |
| 2.6 Intersection of two line segments                          | 22        |
| 2.7 Point-in-polygon operation                                 | 26        |
| 2.7.1 Even-odd algorithm                                       | 27        |
| 2.7.2 Winding number algorithm                                 | 30        |
| 2.8 Map projections                                            | 33        |
| 2.9 Notes                                                      | 46        |
| 2.10 Exercises                                                 | 47        |
| <br>                                                           |           |
| <b>3 Polygon Overlay</b>                                       | <b>49</b> |
| 3.1 Line segment intersections                                 | 49        |
| 3.2 Overlay                                                    | 58        |
| 3.3 Notes                                                      | 66        |
| 3.4 Exercises                                                  | 67        |
| <br>                                                           |           |
| <b>II SPATIAL INDEXING</b>                                     | <b>69</b> |
| <br>                                                           |           |
| <b>4 Indexing</b>                                              | <b>71</b> |
| 4.1 Exercises                                                  | 76        |

|            |                                         |            |
|------------|-----------------------------------------|------------|
| <b>5</b>   | <b><i>k</i>-D Trees</b>                 | <b>77</b>  |
| 5.1        | Point <i>k</i> -D trees                 | 77         |
| 5.1.1      | Orthogonal range query                  | 82         |
| 5.1.2      | Circular range query                    | 84         |
| 5.1.3      | Nearest neighbor query                  | 85         |
| 5.2        | Point region <i>k</i> -D trees          | 87         |
| 5.3        | Testing <i>k</i> -D trees               | 93         |
| 5.4        | Notes                                   | 97         |
| 5.5        | Exercises                               | 98         |
| <b>6</b>   | <b>Quadtrees</b>                        | <b>99</b>  |
| 6.1        | Region quadtrees                        | 99         |
| 6.2        | Point quadtrees                         | 105        |
| 6.3        | Notes                                   | 110        |
| 6.4        | Exercises                               | 111        |
| <b>7</b>   | <b>Indexing Lines and Polygons</b>      | <b>112</b> |
| 7.1        | Polygonal map quadtrees                 | 112        |
| 7.1.1      | PM1 quadtrees                           | 116        |
| 7.1.2      | PM2 quadtrees                           | 122        |
| 7.1.3      | PM3 quadtrees                           | 125        |
| 7.2        | R-trees                                 | 126        |
| 7.3        | Notes                                   | 136        |
| 7.4        | Exercises                               | 136        |
| <b>III</b> | <b>SPATIAL ANALYSIS AND MODELING</b>    | <b>137</b> |
| <b>8</b>   | <b>Interpolation</b>                    | <b>139</b> |
| 8.1        | Inverse distance weighted interpolation | 141        |
| 8.2        | Kriging                                 | 146        |
| 8.2.1      | Semivariance                            | 147        |
| 8.2.2      | Modeling semivariance                   | 150        |
| 8.2.3      | Ordinary kriging                        | 156        |
| 8.2.4      | Simple kriging                          | 162        |
| 8.3        | Using interpolation methods             | 165        |
| 8.4        | Midpoint displacement                   | 170        |
| 8.5        | Notes                                   | 174        |
| 8.6        | Exercises                               | 176        |
| <b>9</b>   | <b>Spatial Pattern and Analysis</b>     | <b>177</b> |
| 9.1        | Point pattern analysis                  | 178        |
| 9.1.1      | Nearest neighbor analysis               | 178        |
| 9.1.2      | Ripley's <i>K</i> -function             | 185        |
| 9.2        | Spatial autocorrelation                 | 191        |
| 9.3        | Clustering                              | 199        |
| 9.4        | Landscape ecology metrics               | 202        |
| 9.5        | Notes                                   | 208        |
| 9.6        | Exercises                               | 209        |

|                                                 |            |
|-------------------------------------------------|------------|
| <b>10 Network Analysis</b>                      | <b>211</b> |
| 10.1 Network traversals                         | 214        |
| 10.1.1 Breadth-first traversal                  | 214        |
| 10.1.2 Depth-first traversal                    | 216        |
| 10.2 Single source shortest path                | 217        |
| 10.3 All pair shortest paths                    | 222        |
| 10.4 Notes                                      | 225        |
| 10.5 Exercises                                  | 226        |
| <b>11 Spatial Optimization</b>                  | <b>228</b> |
| 11.1 1-center location problem                  | 230        |
| 11.2 Location problems                          | 244        |
| 11.3 Notes                                      | 248        |
| 11.4 Exercises                                  | 249        |
| <b>12 Heuristic Search Algorithms</b>           | <b>251</b> |
| 12.1 Greedy algorithms                          | 251        |
| 12.2 Vertex exchange algorithm                  | 253        |
| 12.3 Simulated annealing                        | 261        |
| 12.4 Notes                                      | 273        |
| 12.5 Exercises                                  | 274        |
| <b>Postscript</b>                               | <b>275</b> |
| <b>Appendix</b>                                 |            |
| <b>A Python: A Primer</b>                       | <b>277</b> |
| A.1 List comprehension                          | 280        |
| A.2 Functions, modules, and recursive functions | 282        |
| A.3 Lambda functions and sorting                | 283        |
| A.4 NumPy and Matplotlib                        | 284        |
| A.5 Classes                                     | 288        |
| <b>B GDAL/OGR and PySAL</b>                     | <b>291</b> |
| B.1 OGR                                         | 292        |
| B.1.1 Attributes                                | 293        |
| B.1.2 Geometry and coordinates                  | 293        |
| B.1.3 Projecting points                         | 294        |
| B.1.4 Projecting and writing geospatial data    | 295        |
| B.1.5 Adjacency matrix                          | 298        |
| B.2 GDAL                                        | 300        |
