Preface to the second edition	xiii
Acknowledgements	xv
1 Introduction	1
1.1 Remit of this book	2
1.2 Local models and methods	2
1.3 What is local?	4
1.4 Spatial dependence and autocorrelation	5
1.5 Spatial scale	7
1.5.1 Spatial scale in geographical applications	8
1.6 Stationarity	9
1.7 Spatial data models	9
1.7.1 Grid data	9
1.7.2 Areal data	10
1.7.3 Geostatistical data	10
1.7.4 Point patterns	10
1.8 Datasets used for illustrative purposes	11
1.8.1 Monthly precipitation in Great Britain in 1999	11
1.8.2 A digital elevation model (DEM) of Great Britain	13
1.8.3 Positions of minerals in a slab of granite	13
1.8.4 Landcover in Turkey	13
1.8.5 Digital orthophoto of Newark, New Jersey	17
1.8.6 Population of Northern Ireland in 2001	17
1.8.7 Other datasets	19
1.9 A note on notation	20
1.10 Overview	21
2 Local Modelling	23
2.1 Standard methods and local variations	23
2.2 Approaches to local adaptation	23
2.3 Stratification or segmentation of spatial data	27
2.4 Moving window/kernel methods	28
2.5 Locally-varying model parameters	30
2.6 Transforming and detrending spatial data	30
2.7 Categorising local statistical models	30
2.7.1 The nature of spatial subsets	31

2.7.2	The relationship of spatial subsets to the complete dataset	32
2.7.3	The relationship between a global statistic and the corresponding local statistic	32
2.8	Local models and methods and the structure of the book . . .	34
2.9	Overview	35
3	Grid Data	37
3.1	Exploring spatial variation in gridded variables	37
3.2	Global univariate statistics	38
3.3	Local univariate statistics	38
3.4	Analysis of grid data	38
3.5	Moving windows for grid analysis	39
3.5.1	Image smoothing: Low pass filtering	41
3.5.2	High pass filters	42
3.5.3	Edge detectors	44
3.5.4	Texture	44
3.5.5	Other approaches	47
3.6	Wavelets	48
3.6.1	Fourier transforms and wavelet transforms	48
3.6.2	Continuous wavelet transform	50
3.6.3	Discrete wavelet transform (DWT)	50
3.6.4	Wavelet basis functions	51
3.6.5	Implementation of the DWT	53
3.6.6	Fast wavelet transform: Illustrated example	54
3.6.7	Two-dimensional (2D) wavelet transforms	56
3.6.8	Other issues	60
3.6.9	Applications of wavelets	61
3.7	Segmentation	62
3.8	Analysis of digital elevation models	65
3.9	Overview	71
4	Spatial Patterning in Single Variables	73
4.1	Local summary statistics	73
4.2	Geographically weighted statistics	74
4.3	Spatial autocorrelation: Global measures	80
4.3.1	Testing for spatial autocorrelation	83
4.4	Spatial autocorrelation: Local measures	85
4.4.1	Local indicators of spatial association	86
4.4.2	Use of different approaches	97
4.5	Spatial association and categorical data	98
4.6	Other issues	98
4.7	Overview	98

5	Spatial Relations	101
5.1	Global regression	101
5.2	Spatial and local regression	103
5.3	Regression and spatial data	105
5.4	Spatial autoregressive models	106
5.5	Multilevel modelling	108
5.6	Allowing for local variation in model parameters	109
	5.6.1 Spatial expansion method	111
	5.6.2 Spatially varying coefficient processes	116
5.7	Moving window regression (MWR)	122
5.8	Geographically weighted regression (GWR)	122
	5.8.1 Illustrated application of MWR and GWR	124
	5.8.2 Selecting a spatial bandwidth	126
	5.8.3 Testing the significance of the GWR model	127
	5.8.4 Geographically weighted regression and collinearity	128
	5.8.5 Case study: MWR and GWR	135
	5.8.6 Other geographically weighted statistics	138
5.9	Spatially weighted classification	138
5.10	Local regression methods: Some pros and cons	142
5.11	Overview	142
6	Spatial Prediction 1: Deterministic Methods, Curve Fitting, and Smoothing	145
6.1	Point interpolation	146
6.2	Global methods	147
6.3	Local methods	148
	6.3.1 Thiessen polygons: Nearest neighbours	148
	6.3.2 Triangulation	151
	6.3.3 Natural neighbours	151
	6.3.4 Trend surface analysis and local polynomials	153
	6.3.5 Linear regression	153
	6.3.6 Inverse distance weighting (IDW)	154
	6.3.7 Thin plate splines	158
	6.3.8 Thin plate splines case study	167
	6.3.9 Generalised additive models and penalised regression splines	168
	6.3.10 Finite difference methods	171
	6.3.11 Locally adaptive approaches for constructing digital elevation models	171
6.4	Areal interpolation	173
6.5	General approaches: Overlay	175
6.6	Local models and local data	177
	6.6.1 Generating surface models from areal data	177
	6.6.2 Population surface case study	180
	6.6.3 Local volume preservation	181

6.6.4	Making use of prior knowledge	184
6.6.5	Uncertainty in areal interpolation	189
6.7	Limitations: Point and areal interpolation	189
6.8	Overview	190
7	Spatial Prediction 2: Geostatistics	191
7.1	Random function models	192
7.2	Stationarity	193
7.2.1	Strict stationarity	193
7.2.2	Second-order stationarity	193
7.2.3	Intrinsic stationarity	194
7.2.4	Quasi-intrinsic stationarity	194
7.2.5	Nonstationarity	194
7.3	Global models	194
7.4	Exploring spatial variation	195
7.4.1	The covariance and correlogram	195
7.4.2	The variogram	197
7.4.3	The cross-variogram	198
7.4.4	Variogram models	198
7.5	Kriging	204
7.6	Globally constant mean: Simple kriging	206
7.7	Locally constant mean models	208
7.8	Ordinary kriging	208
7.9	Cokriging	212
7.9.1	Linear model of coregionalisation	212
7.9.2	Applying cokriging	213
7.10	Equivalence of splines and kriging	215
7.11	Conditional simulation	215
7.12	The change of support problem	216
7.13	Other approaches	216
7.14	Local approaches: Nonstationary models	217
7.15	Nonstationary mean	220
7.15.1	Trend or drift?	220
7.15.2	Modelling and removing large scale trends	220
7.16	Nonstationary models for prediction	222
7.16.1	Median polish kriging	222
7.16.2	Kriging with a trend model	222
7.16.3	Intrinsic model of order k	225
7.16.4	Use of secondary data	226
7.16.5	Locally varying anisotropy	233
7.17	Nonstationary variogram	233
7.18	Variograms in texture analysis	240
7.19	Summary	241

8.4	Statistical tests of point patterns	240
8.5	Global methods	246
8.6	Measuring event intensity	247
8.6.1	Quadrat count methods	247
8.6.2	Quadrat counts and testing for complete spatial randomness (CSR)	248
8.7	Distance methods	249
8.7.1	Nearest neighbour methods	250
8.7.2	The K function	251
8.8	Other issues	255
8.9	Local methods	256
8.10	Measuring event intensity locally	256
8.10.1	Quadrat count methods	256
8.10.2	Kernel estimation	256
8.11	Accounting for the population at risk	261
8.12	The local K function	261
8.13	Point patterns and detection of clusters	264
8.14	Overview	270
9	Summary: Local Models for Spatial Analysis	271
9.1	Review	271
9.2	Key issues	272
9.3	Software	272
9.4	Future developments	273
9.5	Summary	274
A	Software	275
	References	277
	Index	307
