

Contents

<i>Preface</i>	(v)
1. Introduction	1
2. Data Models and Axioms: Formal Abstractions of Reality	17
3. Computerisation of Geographical Data Processing	45
4. Data Input, Verification, Storage, and Output	100
5. Creating Continuous Surfaces from Point Data	137
6. The Analysis of Discrete Entities in Space	179
7. Optimal Interpolation Using Geostatistics	203
8. Spatial Analysis Using Continuous Fields	223
9. Errors and Quality Control	265
10. Error Propagation in Numerical Modelling	298
11. Fuzzy Sets and Geographical Objects	321
12. Current Issues and Future Trends in GIS	347
<i>Appendix</i>	358
<i>Bibliography</i>	384
<i>Index</i>	402
